Second: Homework – Model Answers P.14 & 15

1- Answer the following:

Where does food go after you swallow it? Describe the journey of a piece of bread from the moment it enters your mouth.

The bread is chewed and mixed with saliva in the mouth. It passes through the pharynx and esophagus to the stomach, where it is mixed with digestive juices. It then enters the small intestine, where digestion is completed and nutrients are absorbed into the blood. The remaining undigested food passes into the large intestine, where water is absorbed, and the waste leaves the body through the anus.

2- Complete the following:

a. Starch digestion begins in the mouth.

b. Food moves from the mouth to the stomach through the esophagus.

3- Arrange the journey of food:

Correct order: Mouth →Pharynx →Esophagus →Stomach →Small intestine →Large intestine.

4- Give a reason for each of the following:

a. Why is digestion important for the body?

Because digestion breaks down large, complex food into small, simple substances that can be absorbed and used by the body.

b. A huge network of blood capillaries surrounds the wall of the small intestine.

To quickly carry the absorbed nutrients from the small intestine to the rest of the body.

5- Ahmed ate a meal containing bread, meat, salad, and a glass of milk. Answer the following:

Where does the digestion of bread begin?

The digestion of bread begins in the mouth, where saliva starts breaking down starch into simple sugar.
