Types of Non-Fiction Genres and Their Features

1. Biography

- a chronological order of a person's life and achievements.
- **Features:**
    - It includes real events and dates
    - It includes important achievements
    - It includes a description of the person's early life, challenges, and successes

2. Informational Text (Expository)

- Gives facts and information about a topic.
- **Features:**
    - It includes headings and subheadings
    - It includes diagrams, charts, and photos

3. Narrative Nonfiction

- a narrative that gives factual information about a topic and may tell one person's experience related to that topic.
- **Features:**
    - Real people and events
    - Clear setting and sequence
    - Dialogue and character actions

Figurative Language

Figurative language is words used in creative ways to ignite the readers' imagination. The words used do not necessarily have direct meanings.

Examples of Figurative language:

• **Alliteration:** Repeated beginning consonant sounds.

Ex: Peter Piper picked a peck of pickled peppers.

• **Idioms:** Phrases that have different meanings from their parts.

Ex: Amanda spilled the beans. She told her mom everything!

• **Simile:** When two different objects are compared using as or like.

Ex: Adam bolted like a frightened rabbit.

• **Metaphor:** When two different objects are compared without using as or

like.

Ex: The sun is a gleaming pearl.

• **Personification:** Non-human objects given human characteristics.

Ex: The candle flame danced in the wind.

• **Onomatopoeia:** Words that sound like their meanings.

Ex: Splash! Zap! Poof! OMG! Wham!

• **Hyperbole:** is a figure of speech that uses extreme exaggeration to make something sound funny, exciting, or dramatic.

Ex: My brain is going to explode from all this homework!

A. <u>Directions: Read the following passage and then answer the questions.</u>

Living Better, Thanks to Inventions!

Inventions improve people's lives in many ways. People use inventions every day, but they never pause to consider who made them or how they were made. Life would be quite different without the many inventions we have come to rely on.

Automobiles

Automobiles were invented to be a method of transportation over land that did not require the labor of animals. The invention of the automobile changed the landscape and the economy of the nation. This invention led to improved roads. They were transformed from muddy gravel paths into paved highways. Automobiles led to the development of suburbs. People could work in the cities but live away from the noise and crowds of urban life. They also helped people interact with each other by making it easier for them to get together. People could drive to their jobs and their friends' and relatives' homes. The distance between places seemed to contract with the improvement of roads and the arrival of the automobile.

Wheelchairs

Other inventions help fewer people, but they are no less important. The wheelchair, for example, assists people who cannot walk because of their physical condition. A wheelchair is just that—a chair with wheels. Many of them also have motors for independence and greater mobility. All wheelchairs are the same in one way: they help the injured and the physically challenged to get around. They also help friends, family, and others take care of them. People of all ages and different abilities use wheelchairs. Sometimes the need is only temporary.

Telephones

The next time someone gets in touch with you with a message through your telephone, express your thanks to Alexander Graham Bell. He was the man who invented this device. Bell first tested his machine on March 10, 1876. It quickly became popular. His invention opened up a whole new way of communicating. It allowed people to communicate over distances almost instantaneously. Before telephones, most people communicated by writing and by sending letters through the mail. If you can consider such a thing, contemplate what life would be like without telephones.

Computers

Today, computers perform many tasks that only telephones could once do. Much of the work of transmitting phone calls, and thousands of other tasks, is done by computers. Computers are everywhere in the world, and countries could not function without them. We depend upon them to perform many necessary tasks. If computers suddenly shut down, businesses, digital banking and shopping, and travel by airplane and car would halt. Most people would be without energy and communication. Lights would go out, and things could get out of control.

Photography

An invention that has changed our way of seeing ourselves and the world around us is photography. Early photographs captured images of people and events in history. In traditional photography, the light leaves an impression on surfaces coated with chemicals. People used to paint and draw pictures to record people and events in history. Photographs allow us to observe what was there, rather than an artist's interpretation in pencil, paint, or ink. Today, we take digital photographs to record the events of our daily lives, as well as the extraordinary events that we witness.

Taking It Forward

Many inventions have been combined to make life easier. Cell phones have built in cameras so people can take photographs on the go. People can now share those photographs with friends and family right away using telephones and computers. People can use their computers to make video telephone calls. They can talk with friends, family, and coworkers around the world as if they were sitting across the table from them. Without the invention of the photograph, telephone, or computer, these tasks would not be possible. Because these inventions are so familiar to us and we use them every day, they might seem simple. Actually, they are not simple at all, but they have simplified and improved our lives.

1. What is the main idea of the whole passage?

a. Alexander Graham Bell was a famous inventor

b. Inventions have improved people's lives in many different ways

c. Life was better before inventions

d. Automobiles are better than wheelchairs

2. Name two ways automobiles changed lives, according to the text?

_____

_____

3. How are automobiles and wheelchairs similar in how they help people?

a. Alexander Graham Bell invented both

b. Both require animals to work

c. Both are only used in cities

d. Both help people move or get around easily

4. Read the sentence from the passage. Much of the work of **transmitting** phone calls and thousands of other tasks are done by computers.
What does transmitting mean in the sentence above?

a. transferring c. stopping
b. knowing d. losing

5. A. Who invented the telephone?

_____

B. When did he first test it?

_____

6. Why does the author end the telephone section by saying. “Contemplate what life would be like without telephones.’’

a. To make the reader think about how important the invention is

b. Because telephones no longer exist

c. To explain how to invent a telephone

d. Because the author doesn’t like telephones

7. How has photography changed the way people remember important moments? Use details from the text to support your answer.

_____

_____

8. How are telephones and computers alike, based on the passage?

_____

_____

_____

9. What would happen if computers suddenly shut down?

_____

_____

10. In the section “Taking it Forward’’ Why does the author say ‘’Without the invention of the photograph, telephone, or computer, these tasks would not be possible. ’’

a. To explain how to build a computer
b. To say that cellphones are bad
c. To show that the three inventions are connected and all are important
d. To tell us to stop using technology

11. What is the author’s final message in lines 52 -54?

_____

_____

12. Why did the author use subheadings?

a. To make the passage longer

b. To organize information into different topics

c. To confuse the reader

d. To entertain the reader

10. A. What is the genre of the passage?

_____

B. Mention two features from the passage that support your answer.

_____

Unit 3 Week 4

Gulf Spill Superheroes

Weekly Concept:

Teamwork

Essential Question:

What benefits come from people working as a group?

Listening Comprehension

Teamwork in Space

In the mid-1950s, the dream of space travel was close to becoming a reality. However, the race to be the first nation to put a man in space had turned into a fierce competition between the United States and the Soviet Union. Yet by the beginning of the twenty-first century, the situation had changed. Space exploration had become one of the greatest examples of international teamwork in history!

Early Progress

From the beginning, space travel required teamwork. Scientists, engineers, researchers, computer programmers, maintenance workers, and astronauts had to work together. It was their job to design, build, launch, care for, and crew for the vehicles that carried humans into space. 1

Early expeditions showed that humans could survive in space. They could also link vehicles together and walk in space. In 1975, a Soviet spacecraft and an American one docked together. Over the next 25 years, international cooperation in space grew more common.

An International Achievement

Finally, in 2000, the International Space Station was created. The space station was designed to be a research laboratory that orbited Earth. Sixteen nations and thousands of men and women were involved in this amazing project. Teams were responsible for many different tasks. These included research, construction, communications, and operations. Each team contributed its special knowledge to make the project a success. 2

Crews of men and women have been able to live and work full-time in the International Space Station, far above Earth's surface. In its first decade, the space station's crews conducted research in a variety of areas, from human health to space science. They also engaged in ordinary activities, from brushing their teeth to playing the flute.

From the start, those involved in the space station were models of teamwork. They have shown that people from different nations and cultures could cooperate, not only on Earth but also in space. 3

Teamwork in Space

A. Directions: Choose suitable answers.

1. Who competes to send the first man to space?

a. China & Korea

b. India & Egypt

c. Spain & Italy

d. United States & Soviet Union

2. What did space travel require?

a. classmates

b. teamwork

c. friends

d. cousins

3. What did the early expedition show?

a. that humans could survive in space

b. that they can go backward

c. that they failed

d. that humans can breathe

4. What happened in the year 2000?

a. the spacecraft was created

b. the phone was invented

c. the International Space Station was created

d. a plane crashed

5. How many nations were involved in this project?

a. seventeen

b. sixteen

c. thirteen

d. fourteen

Vocabulary **Gulf Spill Superheroes**

Unit 3/Week 4

Word	Definition
artificial (adj.)	something not created in nature
collaborate (v.)	to work together
dedicated (v.)	devoted
flexible (adj.)	can be bent without breaking
function (n.)	the use or purpose of something
mimic (v.)	to imitate
obstacle (n.)	something that blocks one's way
techniques (n.)	special ways of doing something to achieve a desired result

Use the word chart to study this week's vocabulary words.
Write a sentence using each word in your writer's notebook.

Word	Context Sentence	Illustration
artificial	The artificial scorpion moves just like a real one.	
flexible	The snake's flexible body can wrap around the branch.	
function	The function of the lamp is to provide light.	
mimic	The carnival ride tried to mimic a real rocket ship.	
obstacle	The flat tire was an obstacle she could overcome.	
techniques	He has different techniques for catching fish.	

function	flexible	obstacle	artificial
techniques	mimic	collaborate	dedicated

A. Directions: Complete the sentences using one of these words.

1. The _____ of the heart is to pump blood through the body.
2. My mom doesn't like _____ flowers.
3. The two companies agreed to _____ introduce a new product to the market.
4. Our schedule for the weekend is very _____ if you want to come and visit.
5. Adam _____ his first prize to his father.
6. The players need to practice in order to improve their_____.
7. They must overcome several _____ before the restaurant can be opened.
8. The boy can _____ the way his father talks perfectly.

B. Directions: Write (True) or (False).

1. When two people collaborate, they work alone. _____
2. Artificial means real. _____
3. The boy dedicated all weekend to deliver his project on time. _____
4. The boy is flexible; he can move easily. _____

A. Directions: Reread the passage and answer the questions.

Building a Green Town

On May 4, 2007, a tornado demolished the town of Greensburg, Kansas. Nearly all the townspeople survived, but 95 percent of the town's buildings were destroyed. With their town gone, the residents of Greensburg might have given up and moved away. Instead, they chose to stay and rebuild. Within days of the storm, the people of Greensburg chose not only to rebuild their town but to remake it. They resolved to reinvent their town so that it lived up to its name, like a phoenix rising from the ashes. They would make Greensburg a green town.

What Does It Mean to Be Green?

Being green means being environmentally friendly. A person can be green by recycling or composting. A person can use energy-saving lightbulbs or public transportation. For a town, being green is more complicated. It means using efficient and renewable power sources. It means constructing buildings without harming the environment. It means making sure the buildings use energy efficiently. It means gathering and recycling everything from newspapers to rainwater. It means making the town walkable to reduce the use of cars and buses.

Greensburg residents knew what they wanted to do, but they did not know how to do it. So, they built a team. They brought in experts to guide and teach them. Together, the residents and the experts set goals for the new Greensburg and made a plan to reach those goals. They found private companies and government agencies to help them pay for the reconstruction. The greening of Greensburg began.

The Greening of Greensburg

The first step in rebuilding the town was to clean up the wreckage from the storm. Reducing waste is an important part of being green. The townspeople did not want simply to throw away the broken pieces of their old town. They saved and reused as 53 much as they could. Fallen trees were used to make furniture. Bricks were collected and used to build the city hall. Cabinets, farm tools, and metal were also reused. Next, the residents of Greensburg made a remarkable commitment: to use "100" percent renewable energy, 100 percent of the time. This meant generating enough power for the whole town using natural resources such as the sun and wind year-round.

To accomplish this, homes and public buildings were given geothermal heat pumps and solar panels. Geothermal pumps use heat from inside the earth. Solar panels turn sunlight into electricity or heat. The town partnered with an energy company to build a wind farm a few miles outside of town. Today, the wind farm provides more energy than the town uses. The "extra" energy is shared with other towns in Kansas.

In addition to using renewable energy, the town of Greensburg vowed to consume less energy overall. The new city buildings use 42 percent less energy than they had before the tornado. Greensburg's new homes use 40 percent less energy. The new streetlights use special lamps that are 40 percent more efficient than the old ones. The efforts of Greensburg's residents worked. Their town is now a model sustainable community. It offers tours and information for people who want their towns to be more environmentally friendly. Greensburg is, as its citizens claim, "stronger, better, greener."

1. What is the main idea of the passage?

a. Tornadoes are the most dangerous natural disasters
b. Greensburg rebuilt itself into an environmentally friendly town after a tornado
c. Renewable energy is expensive to use
d. Experts always know the best way to rebuild towns

2. A. What happened to Greensburg on May 4, 2007?

_____

_____

B. Why do you think the people of Greensburg decided to rebuild their town instead of moving away?

_____

_____

3. In line 5, the author writes: "…like a phoenix rising from the ashes."

A. Identify the figure of speech and mention what is being compared.

_____

_____

B. Why does the author compare Greensburg to a phoenix?

a. To show that the town was destroyed and then rebuilt stronger
b. To show that the town moved to a different place
c. To show that the town was very old
d. To show that the town was full of animals

4. "People of Greensburg chose not only to rebuild their town but to remake it. They resolved to reinvent their town so that it lived up to its name.'' What does ''**reinvent**'' mean? **Underline** the **context clue** that helped you guess the meaning.

_____

_____

5. What renewable energy sources does Greensburg use to rebuild the town?

_____

_____

6. Read the following excerpt from the passage. Nearly all the townspeople survived, but 95 percent of the town's buildings were destroyed.

Which word in the above sentence is an antonym for built?

a. townspeople b. percent c. buildings d. destroyed

7. A. What is the author's point of view about the people of Greensburg?

_____

_____

B. Use text evidence to support your answer.

_____

_____

8. Why does the author write this passage?
   a. To entertain readers with a story about a tornado
   b. To explain how a town rebuilt itself in an environmentally friendly way
   c. To describe why people should leave damaged towns
   d. To tell a fictional story about a town

9. A. What is the main idea of the passage "Building a Green Town"? Explain how the people of Greensburg worked together to support this idea.

_____

_____

B. Use details from the text to support your answer

_____

_____

10. A. What is the genre of the passage?

_____

B. Mention two features from the passage that support your answer.

_____

11. What is the author's purpose for writing this passage?

a. To entertain the reader with a story

b. To inform readers about how Greensburg rebuilt as a community

c. To explain the importance of kindness

d. To persuade readers to visit Greensburg

portare: to carry	**moliri: to build**	**sumere: to take**
donare: to present or give	**sol: sun**	**habitare: to live or dwell**

Use the Latin roots in the box above to identify the root in the underlined word below. Write the root on the line. Use context clues to determine the meaning of the word. Then write your own sentence using the word correctly.

1. On May 4, 2007, a tornado <u>demolished</u> the town of Greensburg, Kansas.

_____

_____

2. The <u>inhabitants</u> of Greensburg might have moved away.

_____

_____

3. A person can use energy-saving lightbulbs or public <u>transportation.</u>

_____

_____

4. <u>Solar</u> panels turn sunlight into electricity or heat.

_____

_____

5. The town of Greensburg vowed to <u>consume</u> less energy overall.

_____

_____

6. The residents of the town <u>donated</u> their time to help rebuild.

_____

_____

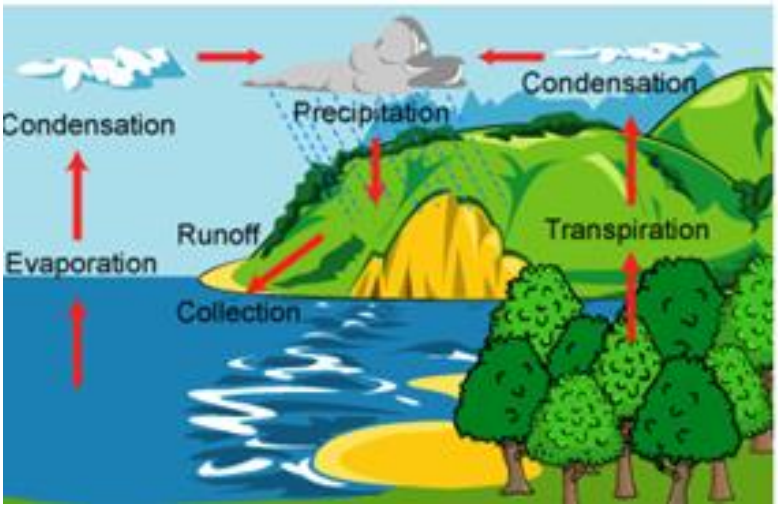

A. <u>Directions: Reread the passage and answer the questions.</u>

Make a Model of the Water Cycle

You can volunteer with three or four friends to do a team experiment. It will show you how heat evaporates water, changes it into droplets, and then turns it back into water. First, you need to know a little about the water cycle. Water moves from the oceans into the air. From the air, it falls as rain or snow back into the ocean or onto land. If it falls on land, it eventually works its way back into the ocean as an overflow of water called runoff.

The water cycle starts when the sun heats ocean water. The sun converts the water into small, invisible particles of moisture called water vapor. The sun and wind cause the water vapor to rise into the air, where it cools off in the atmosphere, or the air that surrounds Earth. Then it changes to drops of water that cluster, or hold together, forming a cloud.

The water in the cloud falls as rain or snow. It may fall back into the ocean, or it may fall on land and eventually work its way back to the ocean as a water overflow called runoff. One way water does this is by falling into tributaries, which are rivers and streams that flow into larger bodies of water. The water may also collect in an underground layer of earth or rock. The rock must be porous enough to let the water flow through it. This water is called groundwater, and it, too, eventually finds its way to the ocean. Then the water cycle starts over again.

As you begin your experiment, remember this amazing fact. The amount of water on Earth now is the same as it was in the past and will be in the future. This means that the water you drank yesterday may once have been the water in the Delaware River when General Washington's troops crossed it during the Revolutionary War. About 71% of Earth's surface is water. This includes not only the water in oceans, rivers, and lakes. It also includes the water in clouds, rain, snow, and groundwater, and in the icy regions at the North and South Poles. Make a model of the water cycle with a partner or small group. Use the instructions below.

Water Cycle Baggie

Materials:

A plastic bag that seals, a small, clear plastic cup, water, red food color, and a permanent marker.

Steps:

1. Fill the cup about halfway with water. Add red food color to the water. Stir. Use the marker to show the water level.
2. Place the cup in the baggie. Seal the bag.
3. Place the baggie in a sunny window.

Observe what happens to the water in the cup. Check the mark showing the water level. You should see that the water level becomes gradually lower. You should also begin to see droplets of water on the sides and bottom of the bag. The water is evaporating from the heat and then changing from the gas created by evaporation to water drops on the sides of the bag. The drops run down the sides and will begin to collect at the bottom. This is what happens when the sun heats the ocean. Particles of moisture rise and form clouds. The drops running down the sides of the bag are like rain falling on Earth.

1. Why did the author write this passage?

   a. To tell a fictional story about water

   b. To explain the water cycle and show how to model it

   c. To convince people to stop using water

   d. To describe different oceans around the world

2. A. Read the following sentence from the passage: The sun converts the water into small, invisible particles of moisture called water vapor.

   The Latin root of converts is vert, meaning “to turn.” What does “converts” mean?

   a. changes b. allows c. helps d. repeats

   B. In line 5, what is “runoff”?

   a. water that flows on land and works its way back to the ocean

   b. water in the clouds

   c. water that disappears

   d. water that turns into ice

3. Read line 15 and find why the author says, " The rock must be porous enough to let the water flow through it. ‘’

   a. To keep the water cold
   b. To let water flow through to the ocean
   c. To stop evaporation
   d. To make the rock stronger

4. What amazing fact does the author share in lines 20- 22?

   _____

   _____

5. The author says, “The drops running down the sides of the bag are like rain falling on Earth.” What does this comparison explain?

_____

_____

6. What are the three main steps of the water cycle described in the passage?

_____

_____

7. Why do you think the author included the Water Cycle Baggie experiment in the passage?

_____

_____

8. What can you infer about the amount of water on Earth from the passage?

_____

_____

10. A. What is the genre of the passage?

_____

B. Mention two features from the passage that support your answer.

_____

11. How is the passage organized?

a. By comparing two things

b. By using subheadings

c. By sequencing, explaining the steps of the water cycle in order

d. By giving a problem and its solution

A. <u>Directions: Read the passage and answer the following questions.</u>

Welcome to the Jungle

Monkeys call loudly from giant trees, huge spiders scuttle across your feet, and insects as big as dinner plates buzz around your ears. You're in the jungle!

Where in the world …

There are three main areas of rainforest. One is in central Africa; another is in Indonesia, but 50% of the world's rainforest is found in South America. Tropical rainforests are found on either side of the equator – an imaginary line that circles the globe like a belt. The weather near the equator provides perfect conditions for lush forests to grow.

It's easy to guess the daily weather forecast in the jungle – hot and humid with heavy rain. Some areas of tropical rainforest get a massive 4 m of rain each year, and the temperature is always between 24 and 27 °C. Many rivers snake through the jungle, carrying excess rainwater towards the sea.

Animal magic

There is an incredible amount of different animals living in the rainforests. They are mostly very shy, however, and are experts at doing disappearing acts among the leaves. Some animals even change their colours and patterns – larger animals are always looking out for lunch!

Fragile forests

Rainforests help to clean the world's air and water. Jungle plants give us medicines that make us well when we are ill. Rainforests are very important but are shrinking every day – chopped down for land and wood. We need to value these amazing forests and take care of all the animals that live in them.

Forest facts

- Tropical rainforests only cover a small area of the world (7%).
- Over half the world's wildlife lives in the rainforests.
- The largest area of tropical rainforest is the Amazon jungle in South America.
- Jungle soil is shallow, only 10 cm deep, yet some of the tallest trees in the world grow in it.

1. What is the main idea of the whole text?

a. How to catch monkeys in the jungle

b. Why spiders are dangerous

c. Facts about tropical rainforests

d. How to travel abroad

2. A. What sound do the insects make?

_____

_____

B. Why does the writer use sights and sounds to describe the jungle?

_____

_____

3. Why do tropical rainforests exist only in this part of the world

_____

_____

4. Suggest one reason why the jungle animals don't want to be seen.

_____

_____

5. Explain why the writer describes the paragraph about the jungle animals as "Animal Magic."

_____

_____

6. In line 5, the equator is described as an imaginary line that circles the globe like a belt. What does this mean?

   a. It's a line around the middle of the Earth

   b. It's a real belt

   c. It's a river in the jungle

   d. It's a type of animal

7. In lines 20–21, why does the author say '' We need to value these amazing forests?

   a. Because they are boring

   b. Because they can be easily replaced

   c. Because there are no animals

   d. Because they are shrinking from being chopped down from land to wood

8. What surprising facts are given about jungle soil and trees?

_____

_____

9. Why is it important to protect rainforests? Give 2 reasons from the text.

_____

_____

10. How is the text organized?

_____

_____

11. A. What is the genre of the passage?

_____

B. Mention two features from the passage that support your answer.

_____

12. How is the text different from a fictional jungle adventure story?

    a. It has no subheadings

    b. This text is to teach real facts about rainforests

    c. It’s shorter than all fictional books

    d. It has no facts at all

A. <u>Directions: Read the passage and answer the following questions.</u>

From Slave to Scientist

George Washington Carver was an African American born into slavery in the South. He went on to become an agricultural chemist. He also taught and did research. His research made him well known, but teaching the children of former slaves may have meant more to him.

Early Years

Carver was the son of a slave woman owned by Moses Carver. As a child, Carver was greatly interested in plants. When he walked in the woods, he would collect different types. He loved to learn like a bee loves flowers. He learned to read and write when he was still a young boy. At first, he was taught at home. Then, when he was about 11 years old, he went to a school for black children.

For the next 20 years, Carver worked his way through school. In 1890, he started college. He showed skill as an artist, but he wanted a career in agriculture. Carver hoped that his work would help African Americans in the South. Many of them worked on farms. Carver finished college in 1894. Then he earned a master's degree in 1896.

Tuskegee Instructor and Researcher

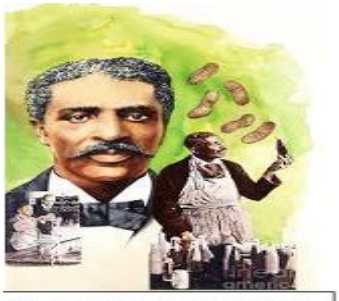

Carver then moved to Alabama to teach at the Tuskegee Institute. This was a school for African Americans. Carver became head of the agriculture department. Carver and his capable students ran experiments to test the soil in Alabama. Through these tests, the students could find out which kinds of plants would grow well there.

In later years, Carver led other research projects to help southern farmers. He looked for ways that farmers could grow more crops. His teams ran experiments in soil management and crop production. He also managed an experimental farm. There, his students planted different types of crops to see which ones would grow best.

The soil in many places in the South was ruined by the planting of only cotton. Cotton had been planted year after year. Carver told local farmers to plant peanuts and sweet potatoes. He found that these crops would grow well in the Alabama soil. They would also put health back into the soil.

Through his research, Carver found that peanuts could be made into many kinds of items. He made at least 300 products from peanuts. Some of these were cheese, milk, and soap. Sweet potatoes also turned out to have many uses. Carver made more than 100 products from sweet potatoes. Flour, ink, and glue were a few of these.

In 1914, Carver published information about his research. As a result, many more farmers began to raise peanuts and sweet potatoes. In 1921, Carver spoke before Congress. He explained the value of peanut production. The peanut became a leading crop in the country. Carver freed the South from its dependence on cotton.

Carver developed hundreds of foods and other products from peanuts to sweet potatoes.

Later years

In 1940, Carver gave his life savings to the Tuskegee Institute. The funds were used to create the George Washington Carver Research Foundation. Carver died in 1943. He is buried on the grounds of the Tuskegee Institute—the place where he had enjoyed such a long and rewarding career.

1. A. Who was George Washington Carver?

_____

_____

B. Who owned Carver's mother when he was a child?

_____

_____

2. What did young Carver love to do in the woods?

_____

_____

3. In line 7, the author says ‘’Carver loved to learn like a bee loves flowers.’’

A. What does this simile mean?

B. What does it tell us about Carver?

_____

4. Read lines 3 to 4. The author says ‘’ His research made him well known, but teaching the children of former slaves may have meant more to him.’’ What did you infer about Carver?’’

_____

_____

5. What did Carver and his students do at Tuskegee?

_____

_____

6. Read the following statements about George Washington Carver’s life. Write (True) or (False).**:**

a. Carver was interested in plants when he was a child. _____

b. Carver chose to become an artist instead of studying agriculture. _____

c. Carver worked as a teacher and researcher at the Tuskegee Institute. _____

d. Carver discovered that peanuts and sweet potatoes could help farmers and the soil. _____

7. How did George Washington Carver help farmers in the South?

_____

_____

8. How do the subheadings ‘’Early Years’’ and ‘’ Tuskegee Instructor and Research’’ help the reader?

a. They are names of pets

b. They are there to fill space

c. They organize the text into different time periods of Carver’s life

d. To tell a made-up story

9. Put these events from Carver’s life in order:

1. Earned a Master’s degree in 1896 _____
2. Moved to Alabama to teach at Tuskegee _____
3. Went to school for black children at age 11 _____
4. published research in 1914 _____

10. What is the author’s main purpose for writing the passage?

_____

_____

11. A. What is the genre of the passage?

_____

B. Mention two features from the passage that support your answer.

_____

A. <u>Directions: Read the passage and answer the following questions.</u>

At Home in the Desert

Georgia O'Keeffe always thought of herself as an artist. By 1928, the rest of the world did, too. At the age of 41, she was living in New York City and becoming a well-known painter. She was married to a famous photographer, who helped her show her work. Still, O'Keeffe wasn't happy.

New York City and her family's summer home had been the source of ideas for almost ten years. Now those ideas were drying up. O'Keeffe felt like she needed a change of scenery. She had visited New Mexico in 1917 with her sister. The wide open space had thrilled her. "Maybe I should go back," she thought to herself.

Her friend Mabel Dodge Luhan encouraged her. In April of 1929, O'Keeffe packed her bags. She went to stay with Luhan in her home in Taos, New Mexico. O'Keeffe wrote to her husband, "Mabel's place beats anything you can imagine about it—it is simply astonishing."

The wide-open space welcomed O'Keeffe with open arms. She spent hours just watching the sky change. The clear light made her feel as if she could see for the first time.

The beauty of the land renewed her. She couldn't wait to start painting. Cow and horse skulls and desert flowers filled her canvases. The colors of the desert inspired O'Keeffe to make new choices in her artwork. "The color up there is different," she explained. She loved the blue-greens in the sagebrush along the mountainsides.

That August, O'Keeffe went home to New York. It was the start of a pattern she would keep up for almost twenty years. Each spring, she traveled to New Mexico to paint. These trips were vital to her spirit. Then, in the fall, she would return to New York to show her work.

During each visit to New Mexico, O'Keeffe explored her surroundings more deeply. Every day was an adventure. In the morning, she would set out to search for new desert scenes to paint. She kept a canvas and brushes in the backseat of her car. Whenever something caught her eye, she could pull them out and begin painting

The bleached animal bones and skulls that O'Keeffe found especially excited her. She saw a strange beauty in them. By experimenting, she found new ways to represent them in her paintings. The bones didn't symbolize death to O'Keeffe. To her, they showed the lasting beauty of the desert.

The unique landscapes, clear light, and bright colors spoke to her. She often painted close-ups of the rocks and mountains. Later, she began to travel more in search of new ideas. However, she always came back to New Mexico. After all these years, it was her home.

As O'Keeffe grew older, her eyesight began to fail. Continuing to paint became difficult. Still, O'Keeffe wasn't ready to stop working. Her friend Juan Hamilton helped her work with watercolors. He also taught her to sculpt with clay. With his aid, she made art into her 90s. When she died at the age of 98, Hamilton sprinkled her ashes over the desert. Her body became part of the land that had touched her art and her life.

1. What is the main idea of the passage?

   a. Georgia O'Keeffe was a famous painter who lived to be 98 years old in New York.

   b. Georgia O'Keeffe struggled with poor eyesight, so her friend taught her to sculpt.

   c. The desert of New Mexico gave Georgia O'Keeffe new inspiration, became her home, and shaped her artistic life.

   d. Georgia O'Keeffe liked to collect bones to sell them.

2. What did O'Keeffe do at age 41?

_____

_____

3. What problem did O'Keeffe have in New York City?

_____

_____

4. A. What two things about the desert inspired Georgia O'Keeffe's artwork?

_____

_____

B. Use details from the passage.

_____

_____

5. Compare and contrast O'Keeffe's life in New York and New Mexico.

_____

_____

6. Read line 12. What does ''astonishing'' mean?

_____

_____

7. What was the effect of New Mexico's "wide-open space" and "clear light" on O'Keeffe on lines 13-15.

8. Read the excerpt from the passage. "The wide-open space welcomed O'Keeffe with open arms."

What is the literary device used?

a. simile b. personification c. metaphor d. proverb

9. What did Georgia do when she began to lose her eyesight? How did she continue making art?

_____

_____

10. Why did the author write the passage "At Home in the Desert"?

a. To describe how deserts are created
b. To explain Georgia O'Keeffe's life and how the desert influenced her art
c. To tell a fictional story about a painter
d. To compare New York and New Mexico

11. What is the theme or lesson you learned from O'Keeffe's life?

_____

_____

12. Put these events in O'Keeffe's life in order:

a. died at age 98
b. visited New Mexico for the first time
c. started traveling to New Mexico every spring
d. moved from New York and became well-known

A. <u>Directions: Read the passage and answer the following questions.</u>

The Birth of the Movies

Why do we love the movies? There is something magical about watching a story play out on a screen as we sit in the darkness. We love westerns, cartoons, horror films, action movies, and love stories. Many of the films we watch are filled with special effects. We might watch them in 3-D or admire their wild car chases or glorious landscapes, but when movies began, films were much simpler and more basic.

In the 1830s, inventors created machines that spun around like wheels and had pictures on them. Viewing the pictures as they cycled around made it look as if the images were moving; the pictures danced across the screen. Next came the zoetrope, a spinning cylinder that viewers peered into with pictures appearing to move. Photographers first developed cameras that could take pictures of motion in the 1870s. A few years later, in 1889, Thomas Edison developed a machine called the Kinetoscope. In it, film moved past a light. When people watched, it seemed as if filmed objects and humans were moving. Only one person at a time could watch the film, but viewers were amazed, and the Kinetoscope soon became very popular.

In France in 1895, the Lumiere brothers created a machine that could take movies and show them, too. Now groups of viewers could watch films at the same time. Thomas Edison and others soon realized that movies could tell stories. By the early 1900s, the first animated movie and the first western had been made. Comedies were especially popular, since people loved to laugh at the movies. By 1909, there were about 9,000 movie theaters in America.

Films were very short in the early 1900s, and there were no such things as movie stars. The performers were unknown, but that did not last long. Moving picture companies organized into film studios and began promoting actors and actresses, who quickly became stars. Audiences were thrilled by pictures of and articles about the theatrical people they saw up on the screen.

At that point, movies were silent, accompanied only by music and sometimes with written titles. Filmmakers had been trying to figure out how to use sound with film for years. The technology was complicated. Thomas Edison had produced a machine that included sound, but he was not able to get the sound to work correctly with the images on film. Finally, in 1927, Warner Brothers Studio produced the first film with sound, The

Jazz Singer. Other films with sound quickly followed. In 1935, color films were first produced. Films began to look like the movies we know today.

In 1952, film studios introduced 3-D films, movies that, when viewed with special glasses, look as if they were three-dimensional. Eight years later studios brought viewers “Smell-O-Vision,” which allowed audiences to smell the scents that were in the movies. Apparently people did not really want to smell their films, so Smell-O-Vision failed.

Since the 1960s, movies have gotten bigger, more full of stars, and more expensive to make. They can be watched on television sets and computers, tablets, and phones. The film industry has changed in many ways, but one thing remains the same. Since the very first days of the moving picture, audiences have been entranced by the ability to watch dramatic stories on the screen. With sound or without, in color or black and white, movies have created joy and amazement in viewers for more than a hundred years.

1. A. What kinds of movies does the author mention that people enjoy watching?

_____

B. What does the author say is magical about watching movies?

_____

_____

2. Name 2 inventions that helped create moving pictures before modern movies?

_____

_____

3. Read lines 5 to 10 and find a figure of speech and explain it.

_____

_____

4. A. Why do you think people were so amazed by the Kinetoscope, even though only one person could watch it at a time?

_____

_____

5. ‘’Audiences were thrilled’’ What does ‘’thrilled ‘’ mean, which word or phrase form the sentences helps you understand its meaning.

_____

_____

6. What does the passage tell us about Thomas Edison’s character?

_____

_____

7. **List the following in the correct order (1–4):**

___ Movies had sound

___ Movie stars became famous

___ First cameras captured motion

___ 3-D films were introduced

8. Do you think movies today are better than early silent films? Explain your opinion using evidence from the passage?

_____

_____

9. How have movies changed from the past to today? Use examples from the text to explain how movies became more exciting and fun to watch over time.

_____

_____

10. How does the author organize information in the passage?

a. Problem & solution

b. Cause & effect

c. Chronological order

d. compare & contrast

10. A. What is the genre of the passage?

_____

B. Mention two features from the passage that support your answer.

_____

Model Exam
Paper 1

I. Reading Comprehension (/15)

A. <u>Directions: Read the passage and answer the following questions.</u>

Be Prepared!

Disasters happen all over the world. They include floods, tornadoes, hurricanes, earthquakes, landslides, and wildfires. Every family needs a plan in case an unexpected disaster strikes its home or community. Disaster plans will vary, and each family should consider the type of emergency most likely to occur.

Flooding is a common emergency. Some floods, called flash floods, develop quickly following heavy rainfall, and they usually affect only a limited area. Other floods develop slowly and affect large areas. Although some floods occur in places never affected before, many places flood consistently. If you live in such an area, your family should be prepared at all times. Have an emergency kit, food and water, and a plan for evacuation, or leaving the affected area.

Hurricanes usually occur in coastal states. They are predicted several days to as much as a week ahead of time. When a hurricane strikes, high winds can cause serious destruction, and flooding is possible. Flooding results from a surge of water from the ocean or gulf. Authorities can mandate that you go to a different location, so it is good to have an evacuation route planned. You might want to arrange to stay with friends or relatives. Many communities open centers that are safer than homes in a hurricane. If your center does not accept pets, you will need an alternate plan for the pet. Ahead of time, make sure your pet has had immunizations. An ID tag will help if you and your pet get separated, and a carrier or cage will protect your pet.

Tornadoes are violent storms, twisting through towns like giant spinning tops and leaving a trail of destruction. They can develop with little advance warning. Just before one touches down, you notice one or more of the following:

- dark sky
- large-size hail
- air that is ominously still
- a low cloud that might be rotating, or turning in a circle
- a loud roar

If you are in a building during a hurricane or tornado, go to a basement or an inside room. Experts say that you should stay away from windows and outside walls. If you are outside, lie flat in the lowest place. Cover your head with your hands.

There are steps everyone should take no matter what the risks are in your particular area. First, hold a family meeting to make a plan. All family members need to know where the emergency supplies are kept. Decide on a place for everyone to meet following a disaster. In an emergency, like a fire, plan to meet at a location right outside. Remember that family members might be in school and at work when a disaster strikes, so plan to go to a place where you can meet if you cannot return home. It is good to have a charged cell phone handy.

Below is a checklist you can use to be prepared for an emergency.

Gather Emergency Supplies

- For each person, 1 gallon of water a day for 3–7 days
- Packaged and canned meats and fish, fruits, and vegetables
- Manual can opener
- Special foods for family members, such as baby food
- Pet food if you have a pet
- First aid kit with bandages, gauze pads, antiseptic, and scissors
- Portable radio • Flashlight/batteries

Other Items

- Paper cups, plates, and plastic utensils
- Paper towels and other paper products
- Trash bags
- Sturdy shoes and warm clothing • Blankets/sleeping bags

Knowing what to expect and being prepared for the worst will help you and your family survive.

1. What is the main idea of the beginning of the passage?
   a. Families should prepare for disasters that may happen where they live.
   b. Tornadoes are the most dangerous disasters.
   c. Hurricanes only happen near the ocean.
   d. Every disaster is the same.

2. Why is it important to know what kind of disasters can happen where you live?

_____

_____

3. Why does the author think it's important for families to have a disaster plan?

_____

_____

_____

4. Read lines 20-25 and find a figure of speech.

_____

_____

_____

5. Read lines 30 - 35 and explain: What are the important steps a family should take to get ready for a disaster?

_____

_____

_____

6. Read the phrase from the article. Manual can opener

The word manual comes from the Latin root man, meaning “hand.” What does this tell you about a manual can opener?

a. It cannot be bought

b. It must be plugged in

c. It cannot open small cans

d. It operates by turning a lever

7. Compare and contrast hurricanes and tornadoes.

_____

_____

_____

8. Read lines 24-27. What are two warning signs that a tornado might be coming?

_____

_____

_____

9. Why do you think the author included the emergency supply checklist in the passage?

_____

_____

10. A. What is the author's purpose in the passage “Be Prepared”?

_____

_____

11. A. What is the genre of the passage?

_____

B. Mention two features from the passage that support your answer.

_____

II. Grammar (/15)

A. Directions: Correct the verbs between brackets. (/5)

1. Listen, someone _____ (knock) at the door.
2. On my way home, I usually _____ (stop) to drink a cup of coffee.
3. The _____ (man) are suspects and will be taken to jail.
4. Jenny _____ (wait) for me when I _____ (arrive).
5. My sister and I _____ (visit) our grandparents next week.

B. Directions: Join the underlined word in each of these sentences to match the correct word. (/5)

1. The girl with the bright red shoes danced on stage. ___ Question Tag
2. We ran quickly through the park to catch the ice cream truck. ___ Compound Sentence
3. He didn't finish his homework, did he? ___ Adjectival Phrase
4. I wanted to go swimming, but it started raining. ___ Reported Speech
5. She explained that she loved reading stories at night. ___ Adverbial Phrase

C. Rewrite each sentence correctly. (/5)

1. The dog barked. (Add an **adjectival phrase** to tell us more about the dog)

_____

2. He ate his sandwich. (Add an **adverbial phrase** to tell us where or when he ate.

_____

3. You’re coming with us. (Add a **question tag** to the sentence.)

_____

4. It was raining. (Change it to a **compound sentence** by adding another related idea.)

_____

5. i love pizza added Jake (Add correct **punctuation** to the **direct speech below**.)

_____
