Nonfiction

Examples of Non-fiction Genres:

1. **Expository Text:**

   writing that explains, describes, or gives information about a topic clearly and logically

2. **Biography:**

   a chronological order of a person's life and achievements

3. **Autobiography:**

   a chronological order of a person's life and achievements written by that person

4. **Narrative Nonfiction:**

   a narrative that gives factual information about a topic and may tell one person's experience related to that topic.

5. **News:**

   reports on current events, issues, and updates happening locally or globally

Figures of Speech

Figurative language is a powerful tool used in literature and everyday communication to add color, depth, and impact to our words. Instead of using words literally, figurative language employs figures of speech to create imagery, evoke emotions, express complex ideas simply, make language more creative and interesting, and make comparisons.

1. Simile

A simile is a direct comparison between two unlike things using the words "like" or "as." It highlights a similarity between the two things being compared.

"Her smile was as bright as the sun."

2. Metaphor

A metaphor is a direct comparison between two unlike things without using "like" or "as." It states that one thing is another, implying a deeper connection or shared quality.

"The classroom was a zoo after the teacher left."

3. Personification

Personification is giving human qualities, characteristics, or actions to inanimate objects, animals, or abstract ideas.

"The wind whispered secrets through the trees."

4. Hyperbole

Hyperbole is an extreme exaggeration used for emphasis or effect, not meant to be taken literally. It creates a strong impression and can be humorous.

"I'm so hungry I could eat a horse."

5. Alliteration

Alliteration is the repetition of the same beginning consonant sound in words that are close together. It is often used for poetic effect or to create a particular rhythm.

"**P**eter **P**iper **p**icked a **p**eck of **p**ickled **p**eppers."

“The **sh**y **sh**eep **sh**uffled silently through the **sh**ady **sh**ed.”

“The **cl**ever **cl**own **cl**apped loudly and **cl**imbed the curtain.”

6. Onomatopoeia

Onomatopoeia is the formation of a word from a sound associated with what is named (e.g., cuckoo, sizzle). These words imitate the sounds they represent.

- "The bacon **sizzled** in the pan while the cat meowed loudly."
- “The clock **ticked** steadily on the wall.”
- “The fire **crackled** as the logs burned.”
- “The car **screeched** to a sudden stop.”

7. Idiom

An idiom is a phrase or expression whose meaning cannot be understood from the ordinary meaning of its individual words. Its meaning is culturally specific and often figurative.

"He's feeling under the weather." (meaning he's feeling sick)

8. Imagery

Imagery is the use of vivid and descriptive language that appeals to one or more of the five senses (sight, sound, smell, taste, touch) to create a mental picture for the reader. While not a single "figure of speech" in the same way as simile or metaphor, it's a broad category of figurative language.

"The crisp, cool air bit at her exposed skin, carrying the sweet scent of pine needles and the faint sound of rustling leaves."

9. Oxymoron

An oxymoron is a figure of speech in which apparently contradictory terms appear in conjunction. It combines two words with opposite meanings to create a surprising or thought-provoking effect.

- As the teacher entered the room, a **deafening silence** fell over the students.
  “Deafening silence” emphasizes how intense and heavy the quietness was.
- A **small crowd** gathered to watch the show.
  “Small crowd” emphasizes the presence of a few people, but still called a crowd.
- She let out a silent scream when the door creaked open.
  “Silent scream” shows intense emotions (expressing fear or shock) without sounds

Unit 0 Week 2

Deserts and People

Essential Question:

What discoveries can people make when they cooperate with others?

A. <u>Directions: Read the passage. Use the reread strategy to check for understanding as you read the passage.</u>

Deserts and People

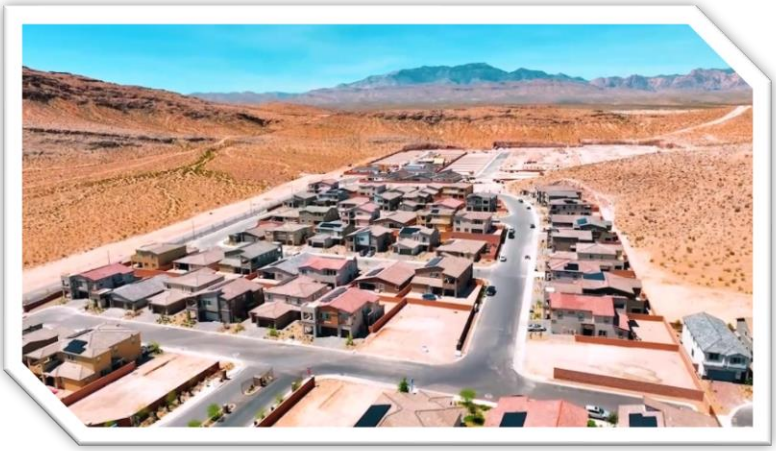

Cartoons often show deserts as huge stretches of sand, without any animals or plants. Few deserts match this simple picture. In fact, a wide variety of plants and animals have adapted to life in dry, desert conditions. But desert ecosystems are fragile. People can dangerously disrupt them.

People: Part of the Problem

When people move into desert areas, they often cause problems for native plants and animals. The four major deserts in the United States—the Chihuahuan, the Sonoran, the Mojave, and the Great Basin—bear witness to this fact. Each of these deserts faces problems brought on by development and recreational use.

The development of communities in and near desert areas requires heavy machinery to construct buildings, roads, and utility lines. Earthmovers and other heavy machines compact desert soil. They also destroy plants and animal habitats.

The damage can have long-lasting effects. It is difficult for water to soak into compacted soil. As a result, rain washes away the soil. Plants have difficulty surviving. Their roots cannot push through the hard soil to reach underground water. Without plants to anchor the soil, wind carries it away.

People who move to desert communities bring pets and non-native plants with them. The pets and plants compete with desert plants and animals for food and water. Homes and businesses also put extra pressure on limited water resources. New lawns and golf courses use underground water. As water levels drop, the roots of desert plants can no longer reach the water. When the plants die, native animals suffer because they lose important sources of food and shelter.

This aerial view shows new housing near a desert area.

Desert regions that become popular recreation areas also face problems like heavy machinery, off-road vehicles, compact soil, kill animals, and crush plants and their roots. It can take a very long time for recreational areas to recover.

A wide variety of plants and animals have adapted to desert conditions.

People: Part of the Solution

People and deserts can coexist. Pima County, Arizona, is an excellent example of a community with a plan. Their motto is "a vision for the future by conserving the past." Through its Sonoran Desert Conservation Plan, the county supports science-based conservation, planned land use, and laws that protect endangered plants and animals.

Development isn't forbidden in Pima County, but it is carefully controlled. Other desert communities would be wise to follow Pima's lead. Conservation and planned growth can help ensure that the United States deserts don't become lifeless stretches of sand.

B. Answer the following questions.

1. What problems are caused when people move into deserts? (Refer to lines 7 to 12)

_____

_____

_____

2. Read the following excerpt.

"A wide variety of plants and animals have adapted to life in dry, desert conditions. But desert ecosystems are **fragile**."

What is an antonym for "fragile"?

a. strong and resilient
b. weak and easily damaged
c. abundant and diverse
d. remote and isolated

3. Read lines 19-27. Why does the author describe the effects of the damage to be "long-lasting"?

_____

_____

_____

4. Read lines 35-40. Why do native desert animals suffer when desert plants die?

_____

_____

_____

5. How does Pima County manage development in desert areas differently from other communities? (Refer to the last two paragraphs)

_____

_____

_____

6. How Read the following excerpt.

"Their motto is 'a vision for the future by **conserving** the past,'"

What does the word 'conserving' mean?

a. ignoring b. saving and protecting c. changing d. destroying

7. What do you think would be the result of communities following Pima's lead?

_____

_____

_____

_____

8. What is the author's point of view about desert development?

_____

_____

_____

9. What's the author's main purpose of writing this text?

_____

_____

_____

10. Circle <u>two</u> text features that show that " Deserts and People" is an expository text.

a. It has photos and captions.
b. It has a diagram.
c. It has headings.
d. It has a map.

Selection 2

Unit 4 Week 2

She Had to Walk Before She Could Run

Weekly Concept:

Overcoming Challenges

Essential Question:

How do people meet personal challenges?

Going the Distance

Every great athlete overcomes difficulty—part of what makes athletes so admirable is the courage and dedication with which they meet their personal challenges. But few athletes can match Diane Van Deren for pure endurance in the face of obstacles.

Diane, a professional tennis player, was raising a family when she found out she had epilepsy, a disorder that causes seizures. She discovered that running blocked some of her seizures, but her condition worsened. She eventually decided to have surgery to remove a piece of her brain in hope of gaining some relief. Surgery ended the seizures, but there were side effects. To manage them, Diane ran—and ran and ran. 1

100-Mile Endurance Races

Today Diane runs incredible distances, competing in grueling tests such as 100-mile races through the Rocky Mountains. The Hardrock 100 Endurance Run travels up and down through the mountains for 100 miles. It is widely considered the most difficult 100-mile race there is. Contestants must finish the race within 48 hours. Diane has run this tough race many times! 2

Overcoming Deep Cold

But nothing compares with the Yukon Arctic Ultra, the endurance trial Diane ran in February 2009. Runners in this race cover 430 miles and must withstand temperatures of 30 to 40 degrees Fahrenheit below zero. It may be the toughest race in the world. Competitors drag a sled of supplies behind them as they run through the frozen terrain.

At the start of the race, Diane's water supply froze, forcing her to run the first 100 miles sucking on frozen blocks of food because she had nothing to drink. On the eleventh day of running, she crashed through ice and fell up to her shoulders in a freezing river, but she climbed out and kept running in her frozen boots. 3

Diane finished—the first woman to do so. Few people would even try. The gratitude Diane feels at overcoming epilepsy has spurred her to meet other challenges with passion, drive, and discipline.

Listening Comprehension: Going the Distance
<u>Directions: Listen to the text then answer the following questions.</u>

1. **What is the genre of the text? Support your answer.**

_____

_____

2. **What medical condition did Diane Van Deren have that affected her running initially?**
   a. asthma
   b. diabetes
   c. epilepsy
   d. migraines

3. **What helps you understand how running helped Diane overcome the challenges of epilepsy and her surgery?**

_____

_____

4. **What does it mean to be an endurance runner? Reread to find clues about the kinds of races Diane entered.**

_____

_____

5. **What are the challenges Diane faced when she ran the Yukon Arctic Ultra?**

_____

_____

6. **How did Diane manage to finish the Yukon Arctic Ultra after her water supply froze?**
   a. by using snow for hydration
   b. by sucking on frozen blocks of food
   c. by receiving help from other competitors
   d. by abandoning the race and returning later

7. **Diane fell in a _____ on her 11th day of the Yukon Arctic Ultra.**
   a. river
   b. well
   c. hole
   d. ditch

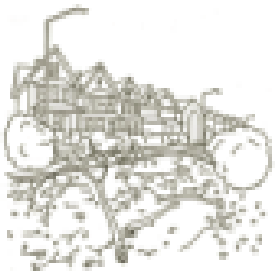

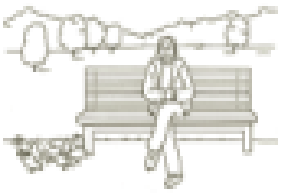

8. **What motivates Diane Van Deren to face and overcome challenges?**
   a. the desire for fame
   b. her personal gratitude for overcoming epilepsy
   c. financial rewards
   d. competition with other athletes

Wonders Vocabulary

Reading Selection: She Had to Walk Before She Could Run

Word	Definition
assess (v.)	to estimate the value or ability of something
compensate (v.)	to make up for something that you lack
deteriorated (v.)	became worse or inferior in condition, value, or character
devastating (adj.)	overwhelming or destructive
implement (v.)	to put something (e.g. plan) into effect or make it happen
peripheral (n.)	the outer edges of where you can see
potential (n.)	possibility
summit (n.)	-the highest point of a hill or mountain - a meeting between officials representing their countries at a conference

A. Use the word chart to study this week's vocabulary words.

Word	Context Sentence	Illustration
compensate	I made a list to compensate for my bad memory.	
deteriorated	The old bridge had deteriorated.	
devastating	The devastating hurricane destroyed the trees on our street.	
peripheral	She could see the birds with her peripheral vision.	
potential	This party has the potential to be the best of all time!	
summit	He hiked to the summit of the mountain.	

B. Directions: Fill in the blanks using the following words.

assess	compensate	deteriorated	devastating
implement	peripheral	potential	summit

1. The company will _____ employees for any extra hours worked during the emergency.
2. Over the years, the building's condition has _____ significantly.
3. The team reached the _____ after hours of challenging climbing.
4. The project has a lot of _____ to improve the company's market position.
5. It's crucial to _____ the new procedures by the end of the month.
6. The teacher asked us to focus on the main topic and not get distracted by _____ details.
7. The hurricane had a _____ impact on the coastal communities.
8. We need to _____ the damage before deciding on the next steps.

C. Directions: Decide whether the following statements are "True" or False".

1. Her health condition has deteriorated. She has become extremely healthy. _____
2. The hotel management will compensate you for being stuck in their elevator. _____
3. It was devastating for Adam to learn that Tom was involved in a car accident. _____
4. Teachers shouldn't assess whether the students understood the lesson. _____
5. These players have unlimited potential. They can't even score a goal. _____
6. My friends and I held a summit in the backyard. _____
7. The city of Cairo implemented new traffic rules. _____
8. The peripheral zone is right in the middle of the field. _____

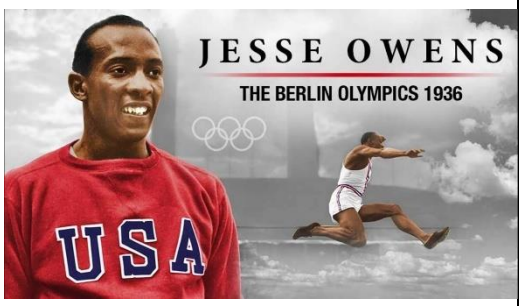

A. <u>Directions: Read the passage. Use the reread strategy to check for understanding as you read the passage.</u>

Jesse Owens: A Message to the World

Jesse Owens was an African American track-and-field legend who set world records and won four Olympic gold medals. Without a doubt, Owens had his personal victories at the 1936 Olympic Games held in Berlin, Germany. However, he achieved even more for people worldwide. At that time, Germany was under the reign of the Nazi leader, Adolf Hitler. The Nazis had hoped to prove that white athletes were better than those of all other races. Jesse Owens won four gold medals and dealt a blow to that Nazi myth. Owens was clearly a superior athlete.

Ready, Set, Go!

When Owens was born in 1913, his parents named him James Cleveland Owens. The family moved from Alabama and settled in Ohio in the 1920s in search of a better life. It was there that a teacher mistook his nickname, "J.C.," for "Jesse." His new name stuck. Owens became a track star in high school, setting records in the high jump and running broad jump. He went on to Ohio State University in 1933, proving to be an outstanding athlete. In 1935, Owens tied world records for the 100-yard dash. He set new world records for the 220-yard dash, the 220-yard low hurdles, and the running broad jump. Owens's success was not just a flash in the pan. He was only warming up for the Olympics.

Hitler had made promises not to promote racism during the 1936 Olympics. He didn't want to lose the chance to hold the Olympics in Germany. Yet, when the time came, signs of Nazi beliefs were clearly seen in banners, salutes, and symbols. The Nazis wanted to prove that white, blue-eyed people were the best.

It was in this tense, unwelcome setting that Jesse Owens competed. Performing to the best of his abilities, Owens proved the Nazis wrong before the whole world—not just once, but four times.

Excellence Confronts Discrimination

Owens set new Olympic and world records even though the Nazis called him inferior. Upon returning to America, he needed bold courage again. People cheered his success, but discrimination was a fact of life in America. After all the problems in Germany, Owens still had to ride in the back of the bus at home. He couldn't choose where he wanted to live, because black people did not live in white neighborhoods. Even though he was an American hero, he wasn't invited to the White House for honors.

Despite his problems, Owens was a man who inspired others. He enjoyed speaking at youth groups, sports banquets, and other organizations. Owens loved working with the youth. He served as a director and board member for the Chicago Boys' Club. He passed on his life message, "Find the good. It's all around you. Find it, showcase it, and you'll start believing it."

Receiving Recognition

The man who had carried the weight of the world on his shoulders and triumphed at the 1936 Olympics eventually got the honors he deserved. In 1976, Jesse Owens was finally invited to the White House. President Gerald Ford presented him with the Medal of Freedom that year. After Owens's death, President George H. W. Bush awarded him the Congressional Gold Medal in 1990.

Jesse Owens won four gold medals at the 1936 Olympics.

Today Owens's desire to help youth continues through the Jesse Owens Foundation. His three daughters work to keep his mission alive. The Foundation provides finances, support, and services to young people to help them go the extra mile and become all they are meant to be.

B. <u>Directions: Answer the following questions.</u>

1. What was Jesse Owens's primary achievement at the 1936 Olympic Games? (Refer to the first paragraph)

_____

_____

_____

2. Read this sentence from the passage.

"Jesse Owens was an African American track-and-field **legend** who set world records and won four Olympic gold medals."

Why does the author describe Jesse Owens as a "legend"?

_____

_____

3. What was Adolf Hitler's promise regarding the 1936 Olympics, and how did reality differ? (Refer to lines 20 to 30)

_____

_____

_____

4. How did Jesse get his name? (Refer to the lines 10 to 15)

_____

_____

_____

5. How did Jesse Owens's experience in America after returning from the Olympics reflect the racial discrimination of the time?

_____

_____

_____

6. Read this sentence from the passage.

"Owens set new Olympic and world records even though the Nazis called him **inferior**."

What word is an antonym to the word "inferior"?

a. superior
b. less important
c. equal
d. lower

7. **What awards did Owens receive from President Ford in 1976 and President Bush in 1990? (Refer to lines 43 to 50)**

_____

_____

8. **What does the author think about Jesse Owens? Cite text evidence.**

_____

_____

_____

_____

_____

9. **What is the author's purpose for writing this passage, and what lessons does this passage teach you?**

_____

_____

_____

_____

_____

10. **Circle <u>two</u> features that show that " Jesse Owens: A Message to the World" is a biography.**

a. It is the true story of a person's life written by someone other than the subject.

b. It is based on the traditions and beliefs of a people.

c. It focuses on a certain time period and aspects of the subject's life, such as important contributions or specific challenges.

d. It depicts events that are made up and could take place in real life.

Vocabulary Strategy: Paragraph Clues

Read each passage. Underline the context clues that help you figure out the meaning of each word in bold. Then write the word's meaning on the line.

1. Clemente was a Pirate for 18 seasons until his **untimely** death at age 38 in a tragic plane crash.

   _____

2. Clemente broke through the racial **barriers** of his day. To achieve his goals, he overcame many obstacles.

   _____

3. A worse challenge that he had to face was **discrimination**. Clemente had not thought much about his race as a black Puerto Rican. However, the United States had laws that separated blacks and whites in the 1950s. Most hotels and restaurants would not allow blacks back then.

   _____

   _____

4. He said words to the effect of "I'm Puerto Rican and you can call me Roberto." He was proud of his **heritage**.

   _____

5. Clemente was a **powerhouse**. He was a hard hitter with a lifetime batting average of .317. Clemente routinely kept hopeful batters from getting to base.

   _____

6. He was a man of **integrity** who stood by what he believed.

   _____

A. <u>Directions: Read the article "Mary McLeod Bethune" before answering the given questions.</u>

Mary McLeod Bethune

Many American schools have been named after Mary McLeod Bethune, a successful and well-known educator. She founded several schools for African Americans, as well as African American women's organizations. She also held important positions in the federal government during President Franklin Roosevelt's administration. Bethune was among the most prominent leaders of her time.

Educator

Mary McLeod Bethune was born in South Carolina in 1875. Her parents and some of her siblings had once been slaves. The family lived in a cabin and farmed land that they owned, instilling strong values and a willingness to work hard.

Bethune's education began at a free school near her home. Because she was a good student, she won a scholarship to a school for African American girls in North Carolina. After graduating, Bethune pursued higher education in Chicago. She wanted to be a missionary, but she was told that African American students were not needed.

Bethune was devastated and decided that, instead, she would dedicate herself to providing a good education for African Americans in America. Bethune and her husband moved to Florida, where she started her first school. She rented a four-room cottage and raised money by selling baked goods and ice cream, and by going door to door. Most of the school's furniture came from the city dump. Bethune's first class consisted of five girls and her son, Albert.

Her determination and business skills made the school a success. Within two years, enrollment at the Daytona Institute had increased to 250 students, mostly girls. Bethune purchased land and built a new campus. She began to focus on high school, and on encouraging students to go to college.

By 1923, Bethune had transformed the Daytona Institute into a college, and her primary goal was to train future teachers. In 1929, she merged her college with a men's college, forming Bethune-Cookman College. Bethune travelled the United States, giving talks to raise funds. She seemed to know just how to convince people to become donors. She also organized African American women's groups, including the National Association of Colored Women.

Leader

Bethune's interests turned into politics. She steered African American women's groups to concentrate on ending unfair laws such as the poll tax, which made it impossible for many poor African Americans to vote. She also focused on public health programs, ending discrimination in the armed forces, and teaching African American history in public schools.

When Bethune realized her women's groups did not have a national voice, she created the National Council for Negro Women (NCNW). The council focused on fighting the unfair treatment of African American women and on segregation, the separation of African Americans and whites.

Along the way, Bethune had met Eleanor Roosevelt, wife of President Franklin Roosevelt, and the two became good friends. Roosevelt helped Bethune get a position at an agency that helped young people find work. Through this job and others, Bethune became a national African American leader. She and other African Americans in the Roosevelt administration pressed for civil rights and greater job opportunities. Bethune and her colleagues joined marches against Washington, D.C., businesses that refused to hire African Americans, and they also demonstrated for the rights of African American sharecroppers.

Toward the end of her life, Bethune wrote about the principles that guided her. She argued for dignity, hope, harmony with all people, and education. And as always, she advocated for the advancement of African Americans. In 1973, Bethune was inducted into the National Women's Hall of Fame. A sculpture was erected in her honor in Washington, D.C.

B. Directions: Answer the questions below.

1. What is the main idea of the first section of the article?

_____

_____

_____

2. Read this sentence from the text.

"Bethune was devastated and decided that, instead, she would dedicate herself to providing a good education for African Americans in America."

What word in the above sentence is an antonym for "thrilled"?

a. decided b. devastated c. dedicate d. providing

3. What caused Bethune to change her dream of being a missionary? (Refer to lines 10 to 15)

_____

_____

_____

4. **What were the major steps that Bethune took to turn her first school into a college? (Refer to lines 15 to 25)**

_____

_____

_____

_____

5. **How did Bethune's approach to education differ from traditional schools of her time?**

_____

_____

_____

6. **Compare Bethune's early life to her life later in Washington, D.C.**

_____

_____

_____

7. **Read this sentence from the text.**
   "Her **determination** and business skills made the school a success."
   What is a synonym of the word in bold?
   a. laziness b. persistence c. forgetfulness d. curiosity

8. **Why does the author include information about Bethune's friendship with Eleanor Roosevelt?**
   a. to entertain the readers with a story.
   b. to compare two famous women.
   c. to explain Roosevelt's life.
   d. to show how Bethune gained support for civil rights.

9. **Why do you think Bethune was so successful in fundraising? (Refer to lines 25 to 30)**

_____

_____

_____

10. How is the passage organized?

a. problem and solution
b. cause and effect
c. chronological order
d. compare and contrast

11. How does the author feel about Mary McLeod Bethune?

a. The author believes that Bethune's work was not important.

b. The author admires Bethune and presents her as an inspiring leader.

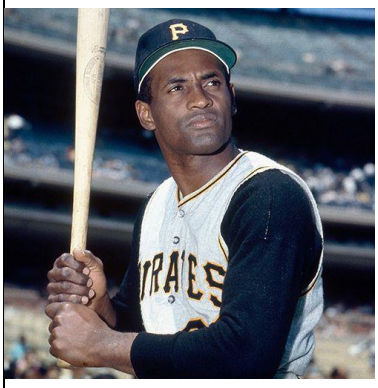

c. The author criticizes Bethune's decision and makes fun of her.

d. The author is unsure whether Bethune made a difference or not.

A. <u>Directions: Read the passage. Use the reread strategy to check for understanding as you read the passage.</u>

Roberto Clemente: A Legendary Life

From Puerto Rico to America

American Baseball Hall of Famer Roberto Clemente was born in rural Puerto Rico in 1934. No one imagined that little boy would someday set amazing records in baseball. From early childhood, Clemente showed exceptional athletic skills. As a teenager, his passion was baseball.

Soon, the word was out. Clemente was offered a baseball contract with the Dodgers while he was still in high school. He accepted, but one year later, he moved on to the Pittsburgh Pirates. Clemente was a Pirate for 18 seasons until his untimely death at age 38 in a tragic plane crash.

Clemente was an American success story. He rose from a life of poverty to become a professional athlete. He stepped into a sport that had been played mostly by white men. This paved the way for other Latinos.

Clemente broke through the racial barriers of his day. To achieve his goals, he overcame many obstacles.

Strike One

When young Clemente came to the United States, he didn't know English. A worse challenge that he had to face was discrimination. Clemente had not thought much about his race as a black Puerto Rican. However, the United States had laws that separated blacks and whites in the 1950s. Most hotels and restaurants would not allow blacks back then. Clemente had to find separate lodging during spring training. He often ate his meals on the team bus.

Clemente may have thrilled baseball fans, but sports reporters did not rally around him. They teased him for his strong Latino accent. Clemente seemed like a foreigner to the African American community. He was an outsider in the mostly white steel town of Pittsburgh. It seemed that Clemente didn't fit in.

Clemente quickly became a defender of his rights and the rights of others. When he heard insults thrown at a teammate, Clemente let everyone know it was wrong. He became a leader in the Major League's union. He demanded fair working conditions for all.

Reporters tried to nickname him “Bob” or “Bobby.” Clemente rejected those American names. He said words to the effect of “I’m Puerto Rican and you can call me Roberto.” He was proud of his heritage.

Play Ball

Clemente was a powerhouse. He was a hard hitter with a lifetime batting average of 317. Clemente routinely kept hopeful batters from getting to base. He could track down balls hit between right and center field with lightning speed. Fans were awed by Clemente’s throwing arm. Clemente won many awards. He took four National League batting titles. Clemente was one of only ten players who had gotten 3,000 base hits. He was awarded 12 Gold Gloves, an honor given to the best fielding players in the league.

Making a Difference

Clemente was a planner and a doer. In 1972, Nicaragua suffered a huge earthquake. Clemente rounded up supplies to aid the victims. On New Year’s Eve, he told his wife goodbye and took off on a flight to Nicaragua. Just after the plane was in the air, one of the engines exploded.

Then there was another explosion. Two more blasts followed. The plane went down. When the word got out, fans around the world mourned his death.

Clemente had seen people struggle, and he wanted to help. He died serving others, which had become his life goal. Those who knew him best would say that Clemente was a model of hard work. He was a man of integrity who stood by what he believed. Clemente was willing to break down barriers and lead the way for others to follow.

B. <u>Directions: Reread the passage and answer the questions</u>.

1. Who was Roberto Clemente? What was he interested in as a teenager?

_____

_____

_____

2. Why did the author include the section “Strike One”?

a. to describe how Clemente became a famous baseball player.
b. to compare Clemente with other baseball players.
c. to explain the challenges and discrimination Clemente faced in the United States.
d. to entertain readers with stories from Clemente’s childhood.

3. **Read this sentence from the text.**
   "Clemente broke through the racial **barriers** of his day."
   What does the word "barriers" most likely mean in this sentence?
   a. walls that blocked roads
   b. difficulties caused by differences in race
   c. guidelines for how to behave
   d. borders between cities

4. **Compare Clemente's treatment by the media with his treatment by fans. What differences can you identify? (Refer to lines 22 to 30)**

   _____

   _____

   _____

5. **What were some effects of Clemente's great skill at playing professional baseball? (Refer to the paragraph under the heading Play Ball)**

   _____

   _____

   _____

6. **What caused Clemente to travel to Nicaragua in 1972? (Refer to lines 41 to 46)**

   _____

   _____

7. **Read this sentence from the passage.**
   "Clemente was a **powerhouse**. He was a hard hitter..."
   What does powerhouse mean in this context?
   a. a place where electricity is made
   b. a very strong and effective person
   c. a famous building
   d. a leader of a team

8. **What message do you think the author wants to convey about Roberto Clemente's legacy?**

   _____

   _____

   _____

9. **Do you think Clemente's actions off the field were as important as his achievements on the field? Why or why not?**

_____

_____

_____

_____

10. **A. How is the passage organized?**
    a. compare and contrast
    b. chronological order
    c. problem and solution
    d. description

    B. Explain your choice.

_____

_____

11. **Which character trait best describes Clemente? Support your answer with two details from the passage.**

_____

_____

_____

_____

12. **What's the genre of the passage? Support your answer.**

_____

_____

Selection 2

Unit 1 Week 4

The Monster in the Mountain

Weekly Concept:

Dynamic Earth

Essential Question:

How do natural forces affect Earth?

The Roar of Lava

There are stories we hear as children that will forever change our lives. For me, it was a story that my father told me over and over again as I was growing up in Hawaii.

My Father's Story

On June 1, 1950, a strange sound ripped my father out of his sleep. What he didn't know at that moment was that the volcano Mauna Loa had begun to erupt, and the disturbing sound he heard was the roar of lava. Soon, people in my father's village figured out what was happening, and all the families fled the village for safer areas. It was scary, but people stayed calm. Luckily, no one was hurt, but as the lava made its way to the ocean, it destroyed homes and parts of the highway. When it entered the ocean, many fish were killed. Steam rose into the air. 1

Every time I heard my father tell this dramatic tale, I watched his eyes light up. I could tell that, even many years later, my father was both scared and in awe of the grand volcano. So, it was in high school that I decided that I wanted to make a career out of studying Mauna Loa. I had many questions; I wanted to know how volcanoes work and if we can predict when they will erupt. 2

My Career

Now, I work with other scientists on discovering answers to these questions. Mauna Loa is one of Earth's largest active volcanoes. With Mauna Loa, we scientists do not wonder if the volcano will erupt again, but when it will. Of course, we can't control the eruptions, but we can use the data we collect to predict where the lava might flow next. We study geographical maps and examine where lava flowed during past eruptions. I even collect gas and lava samples that come directly from the volcano. We can use the information to help keep people safe. 3

I feel lucky to spend my days so close to an active volcano, which I think is one of Earth's greatest wonders. Like my father, I am both amazed and frightened by its power.

Listening Comprehension: Going the Distance

Directions: Listen to the story, and then answer the following questions.

1. **What is the genre of the text? Support your answer.**

   _____

   _____

2. **Why did the author decide to study volcanoes?**

   _____

   _____

   _____

3. **What does the phrase "the roar of lava" suggest about how the eruption sounded?**

   _____

   _____

   _____

4. **What details can you understand about the author's job?**

   _____

   _____

   _____

5. **Why do you think the author chose to tell this story from a personal perspective instead of just giving facts about Mauna Loa?**

   _____

   _____

   _____

Wonders Vocabulary

Reading Selection: The Monster in the Mountain

Word	Definition
cascaded	poured down
documentation	support of a claim with facts, usually by providing proof in writing
dynamic	having energy or forceful activity
exerts	a lot of power to do something
plummeting	the act of suddenly dropping or falling from a high place
pulverize	to crush something into small pieces
scalding	something that is extremely hot
shards	sharp, pointed pieces of glass, metal, pottery, rock, or other material

A. Directions: Use the word chart to study this week's vocabulary words.

Word	Context Sentence	Illustration
cascaded	The water cascaded down the hill.	
pulverize	A hammer can pulverize the shell into tiny pieces.	
plummeting	We saw rocks plummeting over the cliff.	
shards	The bowl broke into shards when it hit the floor.	
exerts	A runner exerts effort in order to win.	
scalding	The girl was careful when she ate the scalding soup.	

B. Directions: Fill in the blanks with words in brackets:

cascaded - pulverize - dynamic - plummeting - exert - shards - documentation - scalding

1. Sam didn't present enough _____ to support his claim.
2. Her long, blonde hair _____ around her shoulders.
3. We all know that when we _____ ourselves, our heart rate increases.
4. I tried to sip the tea, but it was _____.
5. Shawn dreamt that he was _____ off Mount Everest.
6. Sama is young and _____; she'll be a great addition to our team.
7. The tiny wrestler knew his giant opponent was going to _____ him.
8. The plate broke into tiny _____.

C. Directions: Decide whether the following statements are "True" or False".

1. A truck driver exerts energy to unload furniture from the truck. _____
2. When you pulverize a painting, you add more color to it. _____
3. Plummeting stock prices are falling stock prices. _____
4. The scalding cup of coffee was too cold to drink. _____
5. Shards of glass cut his foot as he ran through the ocean. _____
6. Shimmering shooting stars cascaded over the garden. _____
7. Documentation does not contain facts. _____
8. Ecosystems are dynamic and ever-changing. _____

A. <u>Directions: Read the passage. Use the reread strategy to check for understanding as you read the passage.</u>

Mount St. Helen's

The Sleeping Giant

Mount St. Helens is a volcano. It was considered one of the most beautiful volcanic mountains in Washington State. Mount St. Helens lay still for more than 100 years like a sleeping giant. On May 18, 1980, the giant woke up with a boom. A strong earthquake shook beneath it.

At 8:32 A.M. that day, volcanologist David Johnston called his colleagues at the U.S. Geological Survey (USGS). The USGS had set up a base in Vancouver, Washington, to watch the volcanic activity in the mountain range. Johnston was watching Mount St. Helens from a camp on the mountain. He said, "Vancouver, Vancouver, this is it!" Mount St. Helens exploded. It caused one of the largest landslides ever recorded. The north face of the mountain fell in the blast. Spirit Lake was buried in hundreds of feet of debris. Trees were blown down like matchsticks. Johnston and fifty-six people died in the blast. When the ash was still and the smoke cleared, more than 240 miles of forest had been destroyed.

Warning Signs

There had been warning signs. In 1978, scientists at the USGS thought that Mount St. Helens might blast again. It had a history of eruptions. On March 20, 1980, an earthquake was recorded beneath Mount St. Helens. Another quake was recorded three days later. After that, the quakes hit like waves. There were about 15 per hour. By March 25, pilots flying over the volcano saw cracks in the glaciers and a number of avalanches. The giant could not sleep with the strong shakes of the earth below. Huge blasts of steam in April and May led to the great blast on May 18.

A Real-Life Laboratory

Peter Frenzen flew over the blast zone after the eruption. Frenzen was an ecologist. An ecologist is a scientist who studies how plants and animals interact with their environment. All he could see below was a scorched landscape and a "ghost forest" of ash. Still, Frenzen felt excited. He had studied how forests come back from natural disasters on another mountain. Now he had a new site to study forest recovery. Mount St. Helens became a real-life laboratory.

Mount St. Helen after its eruption in 1980.

Frenzen walked around the blast zone and learned that much wildlife still lived. Small animals that live beneath the ground, such as mice and gophers, came out from the ash. Jerry Franklin was the scientist who led the research team at Mount St. Helens after the eruption. He also

40	studied the survival of species after a natural disturbance. He said that buried roots, bulbs, and seedlings were important in rebuilding forests. Because some plants had also survived on the mountain, they would create new habitats and start the recovery of the forests of Mount St. Helens. Large areas of the forest did come back to life as the summer progressed.
45	In 1982, Congress established a monument of 110,000 acres on Mount St. Helens. The monument protects the mountain from logging and allows the forest to regrow. Since then, trees and plants have spread across the landscape. They grow taller and **denser** each year. Writer and scientist Tim McNulty has called Mount St. Helens a lesson in hope. As long as nature is allowed to run, he says, it is a clock that keeps ticking.

B. <u>Directions: Reread the passage and then answer the questions.</u>

1. What happened when Mount St. Helens exploded? (Refer to lines 10 to 15)

_____

_____

_____

2. A. What did the author compare Mount St. Helen's to? (Refer to the first paragraph)

_____

B. Identify the figurative language used.

_____

3. Read the paragraph under the heading "Warning Signs".
What was the effect of the multiple earthquakes that happened?

_____

_____

_____

4. Find a metaphor in the first paragraph and explain it.

_____

_____

_____

5. Read the following from the passage:
"The north face of the mountain fell in the blast. Spirit Lake was buried in hundreds of feet of debris."
Which word means explosion according to the passage?
a. north face b. fell c. blast d. debris

6. **What do you think the author means by calling the forest after the eruption a "ghost forest"? How does this image help you understand the destruction?**

_____

_____

_____

7. **Why did Dr. Frenzen announce that Mount St. Helen's has become a real-life laboratory? (Refer to lines 25 to 34)**

_____

_____

_____

8. **What is the main idea of the passage?**

_____

_____

_____

9. **How might the story of the eruption be different if it were told from the point of view of someone who lived nearby?**

_____

_____

_____

_____

10. **A. What is the genre of this passage?**

a. Narrative Nonfiction
b. Autobiography
c. Drama
d. folktale

B. Mention two genre features that support your answer.

_____

_____

11. How does the author organize the passage?

a. by describing the volcano and then explaining how it recovered after the eruption

b. by explaining different types of volcanoes from the weakest to the strongest

c. by giving opinions about protecting forests

d. by comparing Mount St. Helen's to other volcanoes around the world

12. What is the main purpose of the subheadings in the passage?

a. to make the passage longer

b. to divide the text into sections about different ideas

c. to tell the ending of the story first

d. to persuade the reader to visit Mount St. Helen's

A simile compares two things or ideas using the words like or as.

A metaphor is a direct comparison that refers to one thing as another. It does not use like or as.

Poets use metaphors and similes to compare two very different things that we wouldn't normally think of together, in order to bring up new ideas and surprising observations.

Answer the questions about each of the following comparisons.

1. **In the simile "Like a sleeping giant, Mount St. Helens lay still," how is Mount St. Helens like a giant before the eruption?**

_____

_____

2. **In the simile "Trees were blown down like matchsticks," what force causes the trees to fall, and what does the simile tell you about it?**

_____

_____

3. **What does the simile "After that, the quakes hit like waves" say about the earthquakes?**

_____

_____

4. **What does the metaphor "the giant could not sleep with the strong shakes of the earth below" say about the volcano?**

_____

_____

A. <u>Directions: Read the passage. Use the reread strategy to check for understanding as you read the passage.</u>

Water Shapes the Land

Did you know that about three-fourths of Earth's surface is water, and the water is always moving? Streams begin as tiny trickles of water, high in the mountains. As streams flow downhill, they merge into rivers that rush onward, often emptying into oceans. In the oceans, water circulates continuously, moving around the globe. Waves never stop churning against shorelines and cliffs. Even frozen ice is on the move, creeping along Earth's surface.

The natural forces of water and ice have slowly carved Earth's surface over centuries. Every day, water and ice flow, moving soil and wearing away rock. This slowly changes the shape of the land, like a painting that is never finished.

Carving Canyons

Imagine standing at the edge of the Grand Canyon. At your feet is a narrow, rocky valley stretching as far as you can see. The walls of the canyon form colored bands sloping steeply one mile deep. At the bottom, you can see the Colorado River winding like a snake through the canyon. How did this enormous canyon come to be?

The Colorado River played a critical role in the formation of the Grand Canyon. Canyons form as water flows and picks up rocks. The rocks dash against the sides of the canyon, acting like chisels. Over time, the canyon wears away. It took centuries, but the Colorado River shaped this natural wonder.

Waves and Rivers

Like rivers, oceans can carve and shape the land, wearing away shorelines and cliffs with the power of their waves. In some places, waves produce striking rock formations. A sea cave, for example, is formed when waves wear away the base of a cliff, leaving a cavity in the rock. In other places, one section of the shoreline might wear away more quickly than another because of waves. This can result in the formation of an inlet or a harbor.

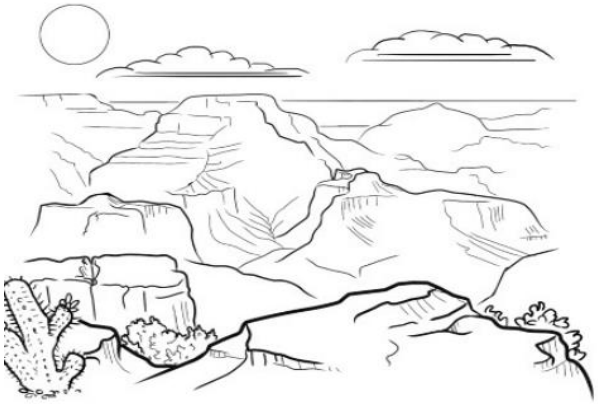

Oceans and rivers carry material from one place to another. Waves deposit sand along the shore, creating long, sandy landforms called barrier islands. Large rivers move small rocks and other materials, called sediment. Over time, the sediment forms low-lying areas called river deltas. The Mississippi River delta is the best known in the United States. This delta is a spider web of land and water sprawling from the mouth of the river into the Gulf of Mexico.

Ice on the Move

In extremely cold places, such as the north and south poles, huge bodies of ice and tightly-packed snow form. These bodies, called glaciers, are so heavy that their own weight causes them to move.

As they slowly move, glaciers carve and shape Earth's surface in much the same way as rivers and oceans. The huge ice sheets are bulldozers, pushing rocks and other loose materials as they creep along. Glaciers pick up large boulders, called *erratic*, and carry them over long distances.

Long, long ago, enormous glaciers covered large parts of Earth's surface. Much of what is now the upper Midwestern United States was covered in ice. This huge glacier flattened the region as it crept along, carving out big chunks of land. Then temperatures rose and the glacier began to retreat, or melt. Basins were left behind, and the melting ice filled them with water, forming the Great Lakes.

Alpine glaciers are found on mountain tops where it is cold enough to keep snow from melting. Alpine glaciers move slowly, forming U-shaped valleys and bowl-like depressions.

B. <u>Directions: Reread the passage and then answer the questions.</u>

1. **Why did the author include an introduction before describing the rivers, waves, and glaciers?**
   a. to introduce the central idea that moving water shapes Earth's surface
   b. to compare different oceans
   c. to explain how weather changes
   d. to tell a story about water

2. **Why is Earth's surface described as a "painting that is never finished"? (Refer to lines 5 to 10)**

   _____

   _____

   _____

3. **Read this sentence from the text.**
   "The natural forces of water and ice have slowly carved Earth's surface
   What does the word *carved* most likely mean in the sentence?
   a. covered
   b. decorated
   c. melted
   d. cut or shaped

4. **What figure of speech is used in the sentence below? Explain it.**
   “At the bottom, you can see the Colorado River winding like a snake through the canyon.”

_____

_____

_____

5. **What role does the Colorado River play in the formation of the Grand Canyon? (Refer to lines 15 to 20)**

_____

_____

_____

6. **Why might the Grand Canyon be considered a “natural wonder”?**

_____

_____

_____

7. **What clues in the text suggest that water is a powerful force of change? (Refer to lines 20 to 25)**

_____

_____

_____

8. **How do the movements of water and ice shape the land over time?**

_____

_____

_____

9. **Read this sentence from the text.**
   “Then temperatures rose and the glacier began to **retreat**, or melt.”
   What does the word *retreat* most likely mean in the sentence?

a. freeze again
b. move backward or shrink
c. rush forward
d. stay in place

10. How does this passage help you understand the power of nature?

_____

_____

_____

_____

11. A. What is the genre of this passage?

a. Expository Text
b. Fantasy
c. Drama
d. folktale

B. Mention two genre features that support your answer.

_____

_____

12. What can you infer about glaciers from the phrase "the huge ice sheets are bulldozers"?

a. They are strong and move things.

b. They are noisy.

c. They can drive on roads.

d. They are made of metal.

13. Which sentence best explains how the passage is organized?

a. It explains one process from the beginning to the end

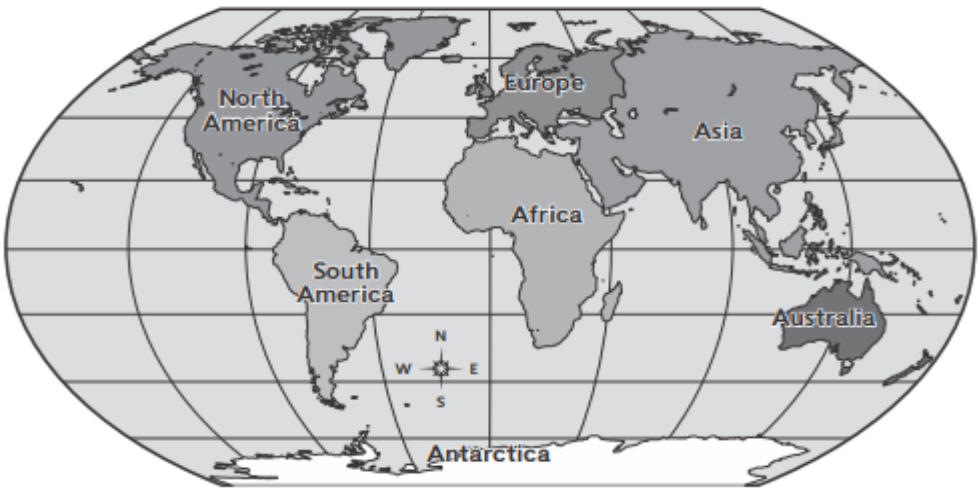

b. It introduces a big idea that explains different examples of how water and ice shape land.

c. It compares rivers with oceans only.

d. It tells a story about explorers.

A. <u>Directions: Read the passage. Use the reread strategy to check for understanding as you read the passage.</u>

On the Move

Have you ever looked at a map of the world? The seven continents seem as though they could fit together like the pieces of a jigsaw puzzle. The eastern coast of South America looks like it would tuck neatly into the lower west coast of Africa. The east coast of North America makes a nice match with the parts of Africa and Europe's west coasts. Scientists have proposed a theory to explain why the continents look this way. They believe that natural forces at work in the Earth's crust cause the continents to move.

Plates That Drift

Tectonic plates, giant slabs of rock that make up Earth's surface, are a central part of this theory. They lie under the land and under the oceans. The amazing thing about tectonic plates is that they move. Gradual changes on Earth's surface, such as the formation of mountains, are caused by the movement of plates. Plate movement can cause events such as earthquakes and volcanic eruptions. The continents lie on top of plates, so they also move.

In the late 1800s, a scientist named Alfred Wegener came up with the theory of continental drift. He thought that long ago, the continents formed a single landmass that he called Pangaea, which means "all Earth." A single ocean surrounded this super-continent.

Wegener believed that Pangaea split apart over the centuries. A large crack formed down the middle, and the super-continent broke into two landmasses. The smaller continent began to move, or drift, north before splitting again. North America, Europe, and Asia were formed, and the rift between North America and Europe became the northern part of the Atlantic Ocean.

At the same time, the second continent began to break apart. This split formed South America, Africa, Australia, and Antarctica. The continents drifted apart for a

long, long time like ships at sea, moving into the positions seen on maps today.

Continental drift also explains how mountain ranges formed. As the plates moved, landmasses sometimes collided and crushed together. These slow-motion impacts caused the land to buckle, like a car in a crash test, and form mountains.

Finding Evidence

Through the years, scientists worked like detectives building a case to support Wegener's theory. One clue came from fossils, the remains of plants and animals. Fossils from the same plants and animals were found on the east coast of South America and the west coast of Africa. These plants and animals could not have crossed the Atlantic Ocean, so the continents must have been connected at one time!

Similar mountain ranges exist on both sides of the Atlantic. Scientists think that the mountain ranges split when the continents broke apart. Also, the coastlines of the continents seem to fit together.

More support for Wegener's theory came from the oceans. Scientists began mapping the ocean floor. Tectonic plates had moved away from each other, forming ridges and rifts. Ridges are like huge mountain chains at the bottom of the ocean, and rifts are like deep valleys separating the ridges.

Scientists figured out that ridges and rifts form when plates move apart. Melted rock pushes up from deep inside Earth and forms ridges. The ridges split as the plates continue moving, forming the deep rifts. This causes the ocean floor and tectonic plates to spread slowly apart. The continents are still moving today in slow motion.

B. <u>Directions: Reread the passage and then answer the questions.</u>

1. Why do scientists think the continents look like puzzle pieces? (Refer to lines 1-5)

_____

_____

_____

2. A. What are tectonic plates, and where are they located?

_____

_____

_____

B. Why do continents move when tectonic plates move?

a. because strong winds push them across the ocean.
b. because earthquakes move them from place to pace.
c. because they sit on tectonic plates that slowly move.
d. because ocean waves carry them over time.

3. **How does the movement of tectonic plates affect people today?**

_____

_____

4. **Who was Alfred Wegener, and what theory did he propose? (Refer to lines 15 to 25)**

_____

_____

_____

5. **Why do you think the continents are compared to "ships at sea"? (Refer to lines 25 to 30)**

a. because they are moving
b. because they turn around
c. because they are still
d. because they move backward

6. "Through the years, scientists worked like detectives **<u>building a case</u>** to support Wegener's theory. One clue came from fossils…"
What does the phrase "<u>building a case</u>" mean?

a. building a house
b. collecting evidence to support an idea
c. solving a mystery
d. creating a map

7. **How does the movement of tectonic plates lead to the formation of mountains? (Refer to lines 25 to 30)**

_____

_____

_____

8. **Why would similar fossils be found on different continents? (Refer to lines 30 to 40)**

_____

_____

_____

9. **What's the author's main purpose of this passage?**
   a. to entertain readers with stories
   b. to compare between different continents
   b. to persuade readers to move to different continents
   d. to explain how continents are always moving

10. **Read this sentence from the text.**
    "Landmasses sometimes **collided** and crushed together**."**
    Which word could possibly replace "collided" in the sentence?
    a. stretched
    b. lifted
    c. slid
    d. crashed

11. **How does the map at the beginning help readers understand the passage?**

    _____

    _____

    _____

12. **Which text structure is used most in the passage?**

    a. compare and contrast

    b. cause and effect

    c. sequence of events

    d. problem and solution

Model Exam Paper I

I. Reading Comprehension (/15)

A. <u>Directions: Read the passage. Use the reread strategy to check for understanding as you read the passage.</u>

An Overview of the Weather

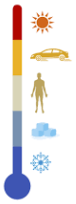

What does the term “weather” mean to you? Everyone knows how to describe the weather. There are beautiful, sunny days with blue skies and gray, rainy days perfect for staying in bed. But do you know what actually causes the weather? The picture above shows the forecast for a week, to help you set your plans for the upcoming days. Soon you will know what causes different types of weather!

Let’s start with a scientific definition of weather. Weather is the state of the atmosphere at a given time and place. Four main factors determine the weather: *temperature, humidity, wind speed and direction*, and *air pressure.*

Temperature

Temperature is the measure of how hot or cold the air is. When the sun shines down on Earth, it warms up the Earth’s surface. But that is not all that happens. The warmth of the sun also heats water on Earth. This process is responsible for many changes in weather and weather patterns. A thermometer measures temperature.

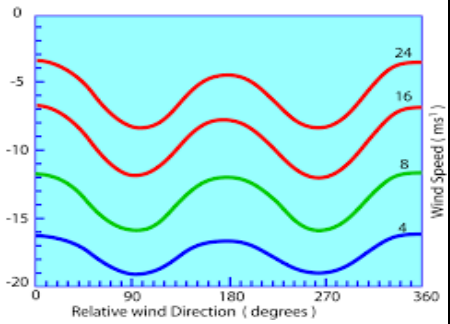

Humidity

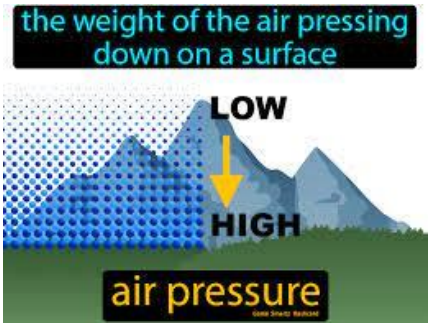

Humidity is the amount of water in the air. The air always has water in it, even though we cannot always see it. Most of the weather conditions that we can observe come from humidity. Clouds, rain, and snow all have to do with humidity. When the water in the air gets cooler, clouds are formed.

Wind speed and direction

Wind speed and direction carry the weather. They also help forecasters predict the weather. Forecasters can measure wind speed and direction to determine how fast a storm is moving. Often the winds blowing far up in the Earth’s atmosphere are different from the winds we feel on Earth.

Air pressure

Air pressure has to do with the thickness of the air. To understand air pressure, imagine you are standing in a room packed with people. There is a lot of pressure in the room. You can feel the person behind you hitting your elbow. If someone opens up a door into an empty room, people will start moving into the empty room until there are about the same number of people in both rooms. Air particles **spread out** in the same way. They always move from an area of high pressure to an area of low pressure resulting in winds of various speeds blowing in different directions. A barometer measures air pressure.

All of the weather's four main factors interact with each other. As air particles respond to changes in pressure, they move and create wind. On a very humid day, there may be many clouds in the sky. When it is cloudy, many of the sun's rays never reach the Earth. What does this do to the temperature?

B. Directions: Answer the following questions.

1. Choose and circle two expository text features used in this passage.

a. headings
b. factual information
c. characters
d. diagrams

2. What are the four main ingredients of weather? (Refer to the second paragraph)

_____

_____

3. What does the word humidity most likely mean in the sentence below?

"Humidity is the amount of water in the air. The air always has water in it, even though we cannot always see it."

a. How heavy the air is
b. The temperature of the air
c. The amount of moisture in the air
d. The speed of the wind

4. **How are rain and snow related to humidity? (Refer to lines 15 to 20)**

_____

_____

5. **How does wind help forecasters track storms?**

_____

_____

6. **What tool is used to measure air pressure?**

_____

7. **Why do air particles move from high pressure to low pressure? (Refer to lines 35-40)**

_____

_____

8. **Why does the author include a comparison between people in a crowded room and air pressure? (Refer to likes 35 to 40)**

_____

_____

9. **What does the word forecast mean in this sentence?**

"The picture above shows the **forecast** for a week, to help you set your plans."

a. a type of map
b. a weather report that predicts the future
c. a storm warning
d. a list of past weather events

10. **Read the sentence from the passage.**

“Air particles **spread out** in the same way.”

What is an antonym for “spread out”?

a. separate
c. speed up
b. delete
d. compress

11. If the sun's rays don't reach the Earth because of the clouds, how might that change the weather that day?

_____

_____

12. All of the following cause weather, except:

a. humidity

b. the sun warming up on Earth

c. the Weather Channel

d. clouds moving across the sky

13. How might a rainy day feel different from a sunny day?

_____

_____

14. How can a rainy day might feel compared to a sunny day?

_____

_____

15. How do the subheadings (Temperature, Humidity, Wind Speed and Direction, and Air Pressure) help the reader?

a. They tell a story in order.
b. They summarize the ending.
c. They give opinions.
d. They organize the information into different topics.
